	PAGE
1. Nature of the Data	
Morbidity data; Hospitalization data; Explanatory matter	2
2. Comment on Current Trends	3
3. Summary for total United States and the Service Commands	
Current week compared with previous week	
Current year to-date compared with corresponding period previous year	4
4. Chart showing Morbidity from (a) All Causes, (b) Disease and (c) Colds, Influenza, etc., for total United States in 1942 and 1943 to date	6
5. Chart showing Variations in Morbidity from (a) All Causes, (b) Disease and (c) Colds, Influenza, etc., by Service Commands in 1943 to date.	7
6. Current week's Morbidity and Hospitalization data for individual stations (other than General Hospitals) having a strength of 5000 or over	8
7. Current week's data for General Hospitals	22
8. List of cases of diseases which are of special interest	25

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The purpose of this report is to call attention to the most recent data of current significance in regard to health conditions and hospital facilities in Army posts in the continental United States.

The data presented here are taken from the Statistical Reports (Form 86ab) rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. These reports are in part necessarily tentative, as for instance in the case of diagnoses of certain communicable diseases.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general, shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is promptly requested and the fact that they have been so questioned is indicated by the symbol (!)

MORBIDITY DATA

In this report admission rates are shown for all causes (disease, injury and battle casualty) combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparison with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per 1000 mean strength which would occur over a year's time if the current week's experience continued through the year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended to the report is a list of cases of the rarer communicable and certain other diseases.

HOSPITALIZATION DATA

The number of patients remaining in hospital at the end of the week per 1000 strengths, as given in this report, furnishes an approximation of the current non-effective rate. Current hospitalization conditions are presented in terms of bed capacity and beds occupied. Only beds in general and station hospitals are here considered; beds in dispensaries, convalescent facilities, venereal disease facilities and college training detachments are excluded.

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) has been placed after admission rates computed on the basis of 5 or fewer cases.

The symbol # has been placed after the name of stations (or groups of stations) where part or all of the data for the current week have not been received and the latest available figures have been substituted therefor.

WEEKLY HEALTH REPORT

COMMENT ON CURRENT TRENDS

WEEK ENDING 2 OCTOBER 1943

CONTINENTAL UNITED STATES

As indicated in the chart on page 4, the admission rate from all causes combined was fractionally higher than for the preceeding week, which registered the lowest level of morbidity in 1943 so far. The admission rate from all causes combined for the week ending 2 October 1943 was about 5% higher than for the corresponding week of 1942.

Despite an increase in the admission rate from colds, influenza, etc., the admission rate from all diseases combined declined for the fifth consecutive week to the lowest level reported this year.

In recent weeks, the admission rate from colds, influenza, etc., has shown the normal seasonal - slightly upward - trend, but remains nevertheless at a substantially lower level than during the corresponding period of time in 1942.

VARIATIONS BY SERVICE COMMANDS

The admission rates from all causes combined and from all diseases combined have in general continued downward in the 4th, 6th, 7th, and 8th Service Commands.

The admission rate from colds, influenza, etc., has in recent weeks been upward in the 1st, 2nd, 7th, and 8th Service Commands.
